Description

James P. Senatore (JPS) provided architectural design services for this municipal operations complex. The building occupies 20,000 square foot that contains two-story constructed with Pre-cast Double 'T' walls. The building was an addition to an existing one story building that required unique design care that houses the Electrical and Purchasing Department.

Mr. Senatore designed custom cabinetry that created unique functionality and savings for the twelve electrical crews on a daily basis. The design included the extension of the Maintenance Truck Bay roof system in order to correct errors designed by the previous architect. The building includes a SCADA system, Fiber optics services and a major UPS (backup) room for emergency services.

Nature of Work

- Building Design
- Customized Interior systems
- Specialized equipment for emergency operations
